Let's Keep It Clean!

How you can protect groundwater too!

Groundwater is so important because it is used for drinking water by more than 50% of people in the United States, including almost everyone who lives in rural areas. The largest use for groundwater is to irrigate the crops that provide tonight's dinner. Groundwater can be found almost everywhere. 51% of the people living in the United States depend on groundwater for their drinking water needs. It would take 219 million gallons of water to cover one square mile with one foot deep.
