Miami Conservancy District
Community Profile:
The rural areas of Limestone County are experiencing contamination due to run-off from large agricultural operations. Rapid growth in these areas has also put stress on the water system, prompting the installation of an additional supply well. Limestone County uses Groundwater Guardian to advise the public about the importance of groundwater protection and sharing ways to prevent groundwater contamination.

Result-Oriented Activities:
Sponsored and coordinated the 2016 Limestone County Groundwater Festival. Over 1,200 students and teachers throughout the county participated in the event, which featured water cycle bracelets, edible aquifers, and filtration activities, plus a show from an eco-magician. The 2016 theme was "Stop the Flow... Save H2O." -- The team led approximately 1,500 individuals in the edible aquifers activity for Earth Day. Participants learned about groundwater, contamination, and more.
New Brockton/Coffee County AL

Sue Leverett
3 Coffee County Office Complex
1055 East McKinnon Street
New Brockton, AL 36351

Phone Number: (334) 894-5581 x 3
E-mail: sue.leverett@centurytel.net
Website:

Community Profile:
Coffee County is home to 45,000 people that utilize groundwater as a drinking water source. The Coffee County Groundwater Guardian team works to prevent groundwater contamination by increasing public awareness about the importance of groundwater as a drinking water source for county residents, encouraging the protection and preservation of groundwater supplies, and instilling groundwater protection practices in students' lives.

Result-Oriented Activities:
Held the annual Coffee County Groundwater Festival for 587 4th grade students and 82 teachers, volunteers and parents. At the festival, students rotated through three stations where they learned about aquifers, water pollution, filtration, and the water cycle. A groundwater poster contest was also held as part of the festival.
Desert Hot Springs CA

Marge Cook
66-875 Yucca Drive
Desert Hot Springs, CA 92240

Phone Number: (760) 329-2211
E-mail: cookm204@earthlink.net
Website:

Community Profile:
A very unique environmental situation exists within the community of Greater Desert Hot Springs. The area's 30,000 residents rely on groundwater for all of their drinking water needs. Residents and visitors from around the world have the opportunity to enjoy both cold and hot water naturally occurring in groundwater aquifers. Separated by the Mission Creek Fault, the cold water aquifer supplies the Greater Desert Hot Springs Community with award-winning drinking water supplied by the Mission Springs Water District, while the hot water aquifer draws visitors to the city's renowned spas providing a tourism base. Desert Springs Middle School works to protect the community’s pristine groundwater resources against contamination for its economic well-being and for future generations.

Result-Oriented Activities:
Collaborated with local school district and the Wildlands Conservancy to provide "Desert Watersheds: From Source to Sand" field trips for 4th, 5th, 6th grade and high school students focusing on educating the students about the water cycle, desert wetland systems, and water conservation. Nearly 9,000 students and 800 volunteers, teachers, staff, and parents have participated in the field trips. Elements of Next Generation Science Standards were incorporated into the program. -- Continued to update the Mission Springs Water District’s website. The updated information is available to approximately 30,000 of the district’s customers.
Community Profile:
A unique environmental situation exists within the community of Greater Desert Hot Springs. The area's 30,000 residents rely on groundwater for all of their drinking water needs. Residents and visitors from around the world have the opportunity to enjoy both cold and hot water naturally occurring in groundwater aquifers. Separated by the Mission Creek Fault, the cold water aquifer supplies the Greater Desert Hot Springs Community with award-winning drinking water supplied by the Mission Springs Water District, while the hot water aquifer draws visitors to the city's renowned spas providing a tourism base. Desert Hot Springs High School is also a designated Groundwater Guardian Green Site, and works to protect the community's pristine groundwater resources against contamination for its economic well-being and for future generations.

Result-Oriented Activities:
Continued participation in the "Desert Watersheds: From Source to Sand" field trip program. Nearly 9,000 students and 800 volunteers, teachers, staff, and parents have participated in this annual field trip program to the Mission Creek Preserve. Elements of Next Generation Science Standards were incorporated into the program.

Continued participation in the "Desert Watersheds: From Source to Sand" field trip program. Nearly 9,000 students and 800 volunteers, teachers, staff, and parents have participated in this annual field trip program to the Mission Creek Preserve. Elements of Next Generation Science Standards were incorporated into the program.
Orange County Water District CA

Crystal Nettles
18700 Ward Street
Fountain Valley, CA 92708

Phone Number: (714) 378-3202,
Fax: (714) 963-0291
E-mail: cnettles@ocwd.com
Website: www.ocwd.com

Community Profile:
Groundwater provides 68 percent of the drinking water for the 2.4 million residents living in Orange County. However, Orange County residents are unaware that groundwater is a primary source of drinking water. In addition, groundwater education in the county is minimal, and more public outreach regarding water conservation and reuse is needed to reduce residents' dependence on imported water. Stormwater and nonpoint source pollution has recently become a threat to both ground and surface water sources. Orange County uses the Groundwater Guardian program to develop innovative methods to provide groundwater information to adults, disseminate information to the community about reliance on groundwater, and mobilize community members to participate in pollution prevention activities.

Result-Oriented Activities:
Participated in various Orange County community events to distribute groundwater education and conservation materials, including corporate environmental fairs, Green Expos, elected official open houses, and more. -- Hosted the Children's Water Education Festival. This two-day annual event was attended by over 6,800 fourth, fifth, and sixth grade students. Additionally, more than 500 volunteers contributed their time and funds. Over 115,000 students have participated in the festival since its inception. -- Provided tours of and presentations about the Groundwater Replenishment System to students, teachers, elected officials, water professionals, dignitaries, and members of the public. These include information about groundwater as source water, the importance of water conservation, and how recycled water projects are vital to local water supplies.
Hernando County FL

Alys Brockway  Phone Number: (352) 754-4749,
15365 Cortez Blvd  Fax: (352) 754-4485
Brooksville, FL 34613  E-mail: abrockway@co.hernando.fl.us

Website: www.hernandocounty.us/utils/groundwater/index.asp

Community Profile:
Hernando County’s 174,475 residents receive 100 percent of their drinking water from local groundwater sources. The inter-relationship of karst formations, stormwater, and saltwater intrusion currently threaten the quality of the area's aquifer. The County is working to provide a sufficient, safe and adequate supply of groundwater now and for the future by developing and implementing conservation strategies countywide. Hernando County uses the Groundwater Guardian program to identify problems, concerns, threats, challenges, opportunities, and solutions and to research, identify, and implement programs and projects to restore and protect the area's groundwater.

Result-Oriented Activities:
Continued to maintain, update and expand the Hernando County Groundwater Guardian Website, which features meeting notices, workshop dates, groundwater protection action items, and activities. Created a "stand along" news website with unique web address to enhance the conservation and protection message. The website has helped draw greater interest in the team's activities and local groundwater resources. -- Continued the Florida Friendly Landscaping program to provide public information and educational opportunities dealing with Florida-friendly lawn and landscaping practices to protect the quality and quantity of groundwater in the county. The annual workshop is broadcast on the local government broadcast channel. Workshop participants receive a $10 water bill credit for attending the workshop. -- Educated area residents on the karst sensitive nature of Hernando County's geology and hydrogeology through a series of seminars, the Hernando County Water Awareness Series 2016. The seminars are also televised on the local government channel to reach the broader community. -- Planned for a best management practices workshop for spring 2017 in coordination with local governments and the Southwest Florida Water Management District. This workshop is held every two years and targets decision makers, community leaders, developers, builders, and citizen's interests.
Boise City ID

Catherine Chertudi
P.O. Box 500
Boise, ID 83701-0500

Phone Number: (208) 384-3912,
Fax: (208) 433-5650
E-mail: cchertudi@cityofboise.org
Website: www.cityofboise.org

Community Profile:
Approximately 80 percent of Boise's drinking water is supplied by groundwater. Declining water levels, groundwater contamination, drought, and increased demand are of concern. Boise uses Groundwater Guardian to energize support, knowledge and interest in protecting and conserving groundwater supplies.

Result-Oriented Activities:
Continued education and outreach projects during Water Awareness Week in May, including classroom presentations, teacher training, and tours at the Boise WaterShed Environmental Education Center. Other activities take place during the school year to supplement the weeklong celebration of water, including field trips to area wastewater and drinking water plants. Approximately 6,300 teachers and students were supplied with educational materials. -- Sponsored a series of water-efficient landscaping courses and tours in partnership with the University of Idaho Extension Service. The workshops provided information about water efficient landscaping, fertilizer and pesticide use, and selecting appropriate plants for the Boise area. -- Participated in a symposium to educate gardeners on reducing water and pesticide use. -- Developed a website to promote source water protection. -- Worked with two city libraries to promote indoor and outdoor water conservation during the month of August through displays and handouts.
City of Loves Park IL

Nathan Bruck  
100 Heart Boulevard  
Loves Park, IL 61111  

**Phone Number:** (815) 654-5033,  
**Fax:** (815) 654-5004  
**E-mail:** nathanbruck@loves-park.il.us  
**Website:** www.loves-park.il.us

**Community Profile:**
The 23,996 people who live in Loves Park receive all of their drinking water from local groundwater supplies. Currently, one municipal well finished in the shallow sand and gravel aquifer is at risk for groundwater contamination from several sources within the well's ten year capture zone. An abandoned landfill, numerous small businesses generating auto and industrial wastes, and a residential area with abandoned wells on most properties contribute to the possibility of contaminants reaching the drinking water supply. Loves Park uses Groundwater Guardian to develop public awareness and understanding of what can impact the quality of the city's water supply, raise awareness about water protection, and encourage businesses and residents in the capture zone to voluntarily protect their drinking water source.

**Result-Oriented Activities:**
Held an annual Youth Groundwater Festival. Ninety volunteers and facilitators educated approximately 700 students about water with four activities. To ensure the continued success of the festival the City also makes a yearly donation.
City of Rock Falls IL

Ted Padilla
603 West 10th Street
Rock Falls, IL 61071

Phone Number: (815) 622-1120,
Fax: (815) 622-1122
E-mail: h2otap@rockfalls61071.com
Website:

Community Profile:
Public wells provide the 9,700 residents of Rock Falls with 85 percent of their drinking water. The chief concerns are nitrates, arsenic, VOC's and SOC's in the water. Rock Falls uses Groundwater Guardian to help educate the public about groundwater.

Result-Oriented Activities:
Provided a $1,000 scholarship with the local electric department to a senior high school student. -- Provided groundwater presentations to four area schools, reaching 300 fifth grade and tenth grade students. -- Provided classes tours of the Water Department plant for 2nd grade students to learn where the city's water comes from and water treatment. -- Continued to update the city's water education website.
McDonough County IL

Steve Bennett
Department of Geology
Western Illinois University, 1 University Circle
Macomb, IL 61455

Phone Number: (309) 298-1256,
Fax: (308) 298-3399
E-mail: sw-bennett1@wiu.edu
Website:

Community Profile:
McDonough County is home to 32,393 residents, as well as a major university, a number of small businesses, ten incorporated communities in various stages of development and excellent farmland. This great economic diversity, together with local landfill expansion, commercial animal confinement operations, and unsewered communities, combine to increase the type and number of concerns related to potential groundwater pollution. Most recently, an over-abundance of phosphate in Macomb's reservoir has become a concern. McDonough County uses the Groundwater Guardian program to expand public education programs in order to keep the population informed about the aquifer and its vulnerability to pollution, as well as to help the public understand where their water supply comes from.

Result-Oriented Activities:
Provided free water testing kits for coliform and nitrates to area residents as a part of Drinking Water Week. Distributed a total of 74 water testing kits at the county health department and a local farm supply store. Many residents have begun returning each year, illustrating the understanding of the need to annually test well water. -- Hosted a booth with activities and distributed information and materials about preventing groundwater contamination at an Earth Day Fair and at the Western Illinois University Environmental Summit. -- Held a Conservation Day, presenting information about groundwater and surface water pollution prevention to approximately 250 fifth grade students. -- Installed 14 stormwater sewer medallions. -- Hosted a well-sealing demonstration attended by 30 people, covered by local television, radio, and print news sources, and recorded and posted online.
Carmel IN

Jaimie Foreman
4915 East 106 Street
Indianapolis, IN 46280

Phone Number: (317) 571-4144,
Fax: (317) 571-4140
E-mail: jforeman@carmel.in.gov
Website: www.carmel.in.gov

Community Profile:
Carmel is home to over 80,000 people. Because the community relies 100% on groundwater and because the community is growing, concerns have arisen about efficient water usage and persisting drought conditions. Carmel uses Groundwater Guardian to bring awareness to the City's Wellhead Protection Areas and spread the word about the importance of efficient water use and water conservation.

Result-Oriented Activities:
Continued operating a Household Hazardous Waste Collection location, collecting materials such as paint, oil, antifreeze and more for proper disposal. -- Created a new YouTube video about proper irrigation, adding to the eight existing YouTube tip videos on various topics (energy saving tips for the winter months, paint tips, a water plant tour, fixing a leaky toilet, and more). -- Featured the team's involvement with the Groundwater Guardian program in the utility's annual consumer confidence report. -- Designated a Hoosier Water Guardian Community by the Indiana Department of Environmental Management for the community's approved Phase I Wellhead Protection Plan.
Elkhart IN

Megan Kolaczyk
1201 South Nappanee Street
Elkhart, IN 46516

Phone Number: (574) 293-2572,
Fax: (574) 293-7658
E-mail: megan.kolaczyk@coei.org
Website: www.elkhartindiana.org

Community Profile:
Groundwater provides 100 percent of the drinking water to 50,000 residents living in the City of Elkhart. Several sites within the community have been included on the Superfund National Priority List due to a threat of contamination from chemicals such as TCE. These threats have caused a great deal of concern for area residents who rely on groundwater for all of their drinking water needs. Elkhart uses the Groundwater Guardian program to increase public awareness and understanding about groundwater issues, to encourage citizens to become more involved in their community and to encourage water conservation and pollution protection.

Result-Oriented Activities:
Continued an Aquatic Biology program to investigate and evaluate the biological communities in the St. Joseph and Elkhart Rivers and their tributaries. As part of the program, the team engaged in educating the public about local fish populations, the importance of sampling aquatic life, and people's impact on water systems by attending festivals, educational events, presenting at local organizations and schools-- Through the stormwater program, 2,244 catch basins were cleaned. Eleven stormwater drains were labeled with storm drain markers. -- Published the City's annual Water Quality Report, which included information about Elkhart's water source.
Indianapolis-Marion County IN

Chris Barnett
P.O. Box 26205
Lawrence, IN 46226

Phone Number: (317) 542-0146,
Fax: (317) 542-0280,
E-mail: cbarnett.lcdc@gmail.com
Website: www.indyh2o.org

Community Profile:
Indianapolis-Marion County's 928,281 residents receive the majority of their drinking water from surface water supplies; however, no additional surface water supplies are available and all growth in the public water supply will come from groundwater sources. Most of the productive aquifers in Marion County are relatively vulnerable to contamination from surface spills. Two of the wellfields are located in older areas of the city with heavy concentrations of industrial and commercial land use. Indianapolis-Marion County Groundwater Guardian is committed to working with owners of potential sources of contamination to teach them best practices.

Result-Oriented Activities:
Continued to identify and educate business owners in the county that might be potential sources of groundwater contamination, with a focus on identifying potential contaminant sources and engaging site owners/occupants in an educational dialogue. Approximately 50 site visits were completed as part of an ongoing face-to-face program. Business owners receive information about groundwater, best management practices, and other resources offered by the Marion County Wellfield Education Corporation. The team is reviewing the effectiveness of the program. -- Began the process of getting the community's input on a new proposed health ordinance and introducing it to the Health Department board. This new ordinance would regulate ongoing operations of businesses storing, using, and handling potential contaminants. -- Informed commercial property owners and tenants of changes to their legal statuses in regards to the recent major re-delineation.
Barnstable County (Cape Cod) MA

Kalliope Egloff  
P.O. Box 367  
3195 Main Street  
Barnstable, MA 02630-0367

Phone Number: (508) 375-6699,  
Fax: (508) 362-4518  
E-mail: kalliope@barnstablecounty.org  
Website:

Community Profile:  
Barnstable County's sandy, permeable soils and shallow depth to the water table make its groundwater particularly vulnerable to contamination. Water resource management efforts on Cape Cod focus on maintaining high quality drinking water within wellhead protection areas, and maintaining and improving water quality in ponds, lakes, rivers, bays, and harbors around Cape Cod. Because development pressures continue to encroach upon all of these areas and because groundwater flows across local boundaries, it is important to develop and implement a regional approach to groundwater protection. Barnstable County has a population of 215,000 with 99 percent relying on groundwater for its drinking water source. Barnstable County uses Groundwater Guardian to sponsor water conservation initiatives, water festivals and other public education activities.

Result-Oriented Activities:  
Held water festival events for schools with over 1,200 students participating. The festivals focused on water quality, conservation and protection. -- Held regional household hazardous waste collections. -- Collected road and marine flares, mercury-containing devices, and unwanted medication.
Linda Kerr
7110 West Q Avenue
Kalamazoo, MI 49009

Phone Number: (269) 375-1591,
Fax: (269) 375-0791
E-mail: lkerr@texastownship.org
Website: texastownship.org

Community Profile:
Groundwater supplies 100 percent of the drinking water to the 15,000 residents of Texas Township. Texas Township has many areas that are not serviced by a public waste water system so it is concerned about the impact on the aquifer. The Township is always seeking ways to protect the aquifer as it continues commercial and residential growth. Texas Township uses the Groundwater Guardian program to develop public awareness and understanding about the township's groundwater resources, educate the citizens on the protection of its aquifers and the importance of safeguarding this valuable resource, as well as to develop a voluntary/regulatory means for protection of the groundwater supply.

Result-Oriented Activities:
Installed Groundwater Guardian signs in the Township’s parks, walking paths, farmers’ market, and the Township Hall to educate and inform the community on groundwater protection efforts.
City of Battle Creek MI

Tiffany Welsh
150 South Kendall Street
Battle Creek, MI 49014

Phone Number: (269) 966-0712,
Fax: (269) 966-3482
E-mail: tawelsh@battlecreekmi.gov
Website: www.bcwater.org

Community Profile:
Battle Creek uses one prolific wellfield, the Verona Wellfield, as the drinking water source for the city's 54,000 residents. It is located in the Marshall Sandstone Aquifer, which is fractured and bordered on its east side by a railroad yard. Twenty years ago contamination was discovered in the area and linked to dry cleaning solvents and questionable storage practices. As a precautionary measure, 12 blocking wells are used to protect the city's 22 production wells, and three backup wells are located in another wellfield. Current industrial activity near the city's main wellfield is a concern. Battle Creek uses Groundwater Guardian as a resource for goal setting and public education in groundwater protection.

Result-Oriented Activities:
Held the 16th annual Children's Water Festival for approximately 1,000 fourth and fifth graders. The festival helps educate students about the City's wellhead protection plan and areas of interaction of groundwater and surface water. - Continued participation in various community events to share general information about groundwater and surface water protection, household hazardous waste, and responsible use of fertilizers and pesticides with over 2,500 people. - Partnered with adjacent townships to enact a similar groundwater ordinance to that of Battle Creek. - Developed and distributed a 2016 wall calendar with monthly water quality protection tips. The team also runs monthly letters to the editor in the local newspaper, radio and movie advertisements, and posted groundwater protection messages on the City's website and Facebook page.
City of Kalamazoo MI

John Paquin
1415 North Harrison Street
Kalamazoo, MI 49007

Phone Number: (269) 337-8737,
Fax: (269) 337-8535
E-mail: paquinj@kalamazooity.org
Website: www.protectyourwater.net

Community Profile:
The City of Kalamazoo is an older, urban community with typical known and potential sources of contamination, including industrial and commercial sites. Groundwater provides all of the drinking water for the City's 122,000 water customers. Five of the City's 17 wellfields have had detectable levels of contamination, with two requiring air strippers to remove volatile organic compounds. The Kalamazoo Public Water Supply has 10 franchise agreements to provide water, with capture zones existing within eight jurisdictions. Currently, land use in Kalamazoo and Texas Township is managed by specific Wellhead Ordinances and Performance Standards. Kalamazoo actively participates in intergovernmental cooperation with a proactive approach to public education. Kalamazoo uses Groundwater Guardian to plan and implement non technical WHP Program projects, as well as providing project framework to focus specific efforts.

Result-Oriented Activities:
Continued comprehensive public education and outreach efforts; a collaborative radio ad campaign with The City of Battle Creek Groundwater Guardian team, 12 movie trailer ads, public events, bus placards, articles, website visits, presentations to youth groups, and facility tours. -- Worked with the City and the Public Safety Department to collect information from businesses, including a chemical inventory and storage information. Additional information on chemical management practices is gathered from businesses in the wellhead protection area. Site inspections were conducted.
**City of Marshall MI**

Cheryl Vosburg  
323 West Michigan Avenue  
Marshall, MI 49068  

**Phone Number:** (269) 558-0328,  
**Fax:** (269) 789-4628  
**E-mail:** cvosburg@cityofmarshall.com  
**Website:** www.cityofmarshall.com

**Community Profile:**  
The City of Marshall's 7,500 residents rely on groundwater for 100 percent of their drinking water needs. Though there are currently no major problems with local drinking water supplies, residents are concerned about protecting groundwater resources for future uses. Marshall uses Groundwater Guardian to educate local citizens about the need to safeguard water resources and their role in its protection.

**Result-Oriented Activities:**  
Participated in the Calhoun County Conservation District's Earth Day celebration. Over 200 students participated and played the Water Jeopardy game to teach them about water resource conservation and protection. -- Participated in the City's annual River Clean Up & Conservation Day by conducting tree planting, native plant demonstrations, and providing wellhead protection and groundwater education. -- Participated in the annual Battle Creek Children's Water Festival for school-aged children with an activity that investigated various water-related topics including the water cycle, groundwater pollution, and conservation. -- Participated in the Greening of Marshall in the spring and fall by planting more than 80 trees. Participants and volunteers learned about water's vital role in everyone's daily lives and the importance of protection.
Coldwater MI

Brian Musselman
One Grand Street
Coldwater, MI 49036

Phone Number: (517) 279-4805,
Fax: (517) 279-0805
E-mail: bmusselman@coldwater.org
Website: www.cbpu.com

Community Profile:
Coldwater’s population of 10,555 receives all of its drinking water from four public wells located within a 8.2 square mile area. Protecting the water supply and continuing to encourage conservation are top priorities for Coldwater's Groundwater Guardian team. Coldwater uses the Groundwater Guardian program to bring national attention to local groundwater protection efforts.

Result-Oriented Activities:
Continued a Pollution Recycling and Reduction Initiative. -- Educated elementary school children about the importance of conservation and pollution prevention. Students attended tours of the water treatment plant. -- Continued to update and improve a source water protection program and management plan for the area's drinking water supply. -- Distributed informational material with bills to water customers.
Greater Lansing Area MI

Christine Spitzley
3135 Pine Tree Road, Suite 2C
Lansing, MI 48911

**Phone Number:** (517) 393-0342 x 15,
**Fax:** (517) 393-4424
**E-mail:** cspitzley@mitcrpc.org

**Website:**

**Community Profile:**
The Greater Lansing Area's 465,000 residents receive 100 percent of their drinking water from local groundwater resources. Currently, groundwater-related concerns are carbon sequestration, unsealed abandoned wells, urban sprawl and additional infrastructure, manufacturing and heavy industry, as well as the ongoing education and involvement of elected officials and the loss of state funding and staff for wellhead protection efforts. The Greater Lansing Area Groundwater Guardian team uses the program to encourage communication among neighboring communities and to provide education to elected officials.

**Result-Oriented Activities:**
Updated a potential contaminant source inventory. -- Updated the wellhead protection plan which focuses on wise land use, ordinance, planning and emergency response decisions, and cooperation among area communities. -- Completed six audits to determine how effective wellhead activities and policies are in protecting groundwater. Four presentations have been given to local elected boards presenting the findings.
Community Profile:
Michigan State University is home to 50,000 students who receive 100 percent of their drinking water from groundwater. The majority of the campus water supply wells are located south of the main campus where the University’s agricultural research farms are located. These land uses within the recharge area may pose a threat to the groundwater supply. Michigan State uses Groundwater Guardian to build support for the University’s drinking water and stormwater management programs.

Result-Oriented Activities:
Presented at the MSU Science Festival on water sources and the local drinking water supply to approximately 100 students and educators with the edible aquifers activity. Updated wellhead protection area maps and developed an online mapping system for internal use by the wellhead protection planning team.
City of Detroit Lakes MN

Erin Ryding
1025 Roosevelt Avenue
Detroit Lakes, MN 56501

Phone Number: (218) 846-7101,
Fax: (218) 847-8969
E-mail: eryding@ci.detroit-lakes.mn.us
Website: www.ci.detroit-lakes.mn.us

Community Profile:
Groundwater supplies 100 percent of the drinking water to the 8,763 people who live in the City of Detroit Lakes. The City is committed to locating and properly closing abandoned wells within capture zones and continues to seek funding for proper sealing. Detroit Lakes uses Groundwater Guardian to educate local students about the water system, involve the public in groundwater protection, and continue management practices of the land within the groundwater recharge area.

Result-Oriented Activities:
Coordinated with Rossman Elementary and Holy Rosary Catholic Schools to hold a one day water festival for 16 fourth grade classes from five schools with hands-on activities to learn about wellhead protection, fluoride in drinking water, AIS, stormwater run-off and conservation. Students gave presentations about a variety of groundwater-related topics. City staff serve as mentors to the student presenters. -- Hosted a booth at a builders association fair and distributed materials on groundwater conservation and wellhead protection.
Holy Rosary Catholic School MN

Lauretta Kapphahn
1043 Lake Avenue
Detroit Lakes, MN 56501

Phone Number: (218) 847-5306,
Fax: (218) 847-8969
E-mail: lkapphahn@holyrosarycc.org
Website: holyrosarycc.org/

Community Profile:
Holy Rosary Catholic School is located in the City of Detroit Lakes and receives all of its drinking water from local groundwater supplies. This elementary school is committed to educating its students and the surrounding community about the importance of protecting groundwater, and will use Groundwater Guardian to help do so.

Result-Oriented Activities:
Held the 2016 Water Festival attended by more than 150 students, parents, and the general public. Fourth grade students, working with mentors from Detroit Lakes, served as festival presenters and shared the groundwater protection message with those in attendance. Presentations focused on wellhead protection, fluoride in drinking water, AIS, stormwater run-off, and conservation.
Rossman School MN

Shelly Gilson
1221 Rossman Avenue
Detroit Lakes, MN 56501

Phone Number: (218) 847-9268,
Fax: (218) 847-8969
E-mail: sgilson@detlakes.k12.mn.us
Website: rs.dlschools.net

Community Profile:
Rossman School is located within the City of Detroit Lakes in western Minnesota. Because the residents rely on groundwater for all of their drinking water needs, educating the public and youth about the protection and conservation of this resource is the primary goal. The Rossman Team uses Groundwater Guardian to identify private wells that could pose a risk to city wells and their recharge area.

Result-Oriented Activities:
Students worked with mentors at the City of Detroit Lakes to learn about the importance and protection of the water supply. Students took tours of the mentors' workplaces and learned about groundwater's importance to their community and how to be groundwater stewards. The students then presented what they learned to other students and community members as part of a community water festival.
Independence MO

Karen Kelley
11610 East Truman Road
Independence, MO 64050

Phone Number: (816) 325-7698,
Fax: (816) 325-7699
E-mail: kkelley@indepmo.org
Website: www.independencemo.org

Community Profile:
The 116,000 residents of Independence rely on groundwater for all their drinking water needs. However, the wells and treatment facility are located in an adjoining political entity so the City of Independence doesn't have control over zoning and land use. There are several high profile sites in the vicinity of the treatment plant that could possibly endanger the water supply, and public perception often focuses on these sites as a cause for concern. A wellhead protection plan is in place and a network of early warning monitoring wells are tested on a routine basis. The plan calls for public education as a component, which is fulfilled through Groundwater Guardian efforts. The Independence team uses Groundwater Guardian for ideas and solutions in local groundwater education efforts.

Result-Oriented Activities:
Provided groundwater protection, pollution prevention, and water cycle education to 5th grade students from all 18 schools in the school district. Students toured the water plant, learning about the water cycle and the importance of keeping groundwater safe. Students also made edible aquifers to demonstrate groundwater contamination. Over 1,100 students participated.
Community Profile:
Sedalia is home to 21,000 people. Sixty percent of the community's drinking water is supplied by groundwater. Current sedimentation rates are threatening surface water supplies, along with high levels of phosphorus and nitrogen. Dropping groundwater levels also are a concern for residents. Sedalia uses Groundwater Guardian to continue community education efforts to the community on their role in protecting groundwater.

Result-Oriented Activities:
Continued to provide education to the community about their role in the preservation and quality of safe drinking water, through bi-lingual newsletters with water bills, classroom visits to elementary and high school classes, and presentations to community leaders and civic groups. -- Continued collecting materials at an established yard waste facility. -- Worked with 22 volunteers to remove debris at community clean-up events of local waterways.
Beatrice NE

Steve Kelley
P.O. Box 279
Beatrice, NE 68310

Phone Number: (402) 228-5217,
Fax: (402) 223-5181
E-mail: skelley@beatrice.ne.gov
Website: www.beatrice.ne.gov

Community Profile:
The City of Beatrice relies on groundwater for all its drinking water needs. The city is home to over 12,000 residents. Drinking water is supplied by and blended from two separate wellfields. Nitrate levels in both wellfields are a concern, and the City uses Groundwater Guardian to help educate farmers and city residents about best management practices.

Result-Oriented Activities:
Held an educational training for 30 farmers with land in the wellhead protection area. Presentations included information on best management practices for irrigation. -- Held an educational training for 25 city residents about chemical use and water conservation in lawn care. Both trainings are aimed at getting residents to look at the bigger picture of groundwater protection.
Cargill Team Blair NE

Michelle Bucklin
P.O. Box 300
Blair, NE 68008

Phone Number: (402) 306-3489,
Fax: (952) 367-1520
E-mail: michelle_bucklin@cargill.com
Website:

Community Profile:
Blair is a mostly rural area, home to a population of 9,000, with an emphasis on agriculture, but is also home to several large industrial facilities, including Cargill. Cargill is a large industrial user of water, and its treatment and reuse are top priorities as the water used by the plant is returned to the environment. As an agricultural partner in the farming community, Cargill supports best land management practices, pollution prevention, and water conservation/reuse. Land and water conservation and pollution prevention are some of the most important issues for this community. Cargill Blair uses Groundwater Guardian to provide educational tools and activities in local schools and participates in the Nebraska Children's Groundwater Festival to extend its scope of beyond the local Blair community.

Result-Oriented Activities:
Presented educational activities at the 2016 Nebraska Children's Groundwater Festival. -- Presented groundwater and wastewater solutions with lab exercises to demonstrate water treatment methods and pollution prevention measures to three high school science classes.
Grand Island NE

Roger Andrews
2524 West John Street
Grand Island, NE 68803

Phone Number: (308) 384-5771,
Fax: (308) 384-7946
E-mail: rajandws@kdsi.net
Website:

Community Profile:
Grand Island relies on wells within the city and wells located on an island in the Platte River to supply the city's 50,000 residents with drinking water. The sand and gravel aquifer underlying the area is very porous, causing rapid recharge. While the porosity makes the aquifer suitable for well installation, any contaminants present can easily leach into the aquifer. Severe contamination from industrial solvents was discovered in 2003, as well as other pollutants in December 2004 and January 2006. Grand Island uses Groundwater Guardian to help educate local citizens about the importance of keeping contaminants out of the water supply.

Result-Oriented Activities:
Presented the "Water Rockets" activity at the 2016 Nebraska Children's Groundwater Festival for over 125 students, and provided information about the city's water use. -- Worked with the local public access television station to air "The Price of Water," a documentary about the state's water resources. -- The team is working with local schools to present groundwater material at after-school programs. The team led three presentations at a summer school program for 60 students. -- Continued to work with a local school and Natural Resources District to beautify a portion of the Wood River. Native trees and shrubs were added and dead ones replaced. -- Continued to maintain an Outdoor Learning Area at Nebraska's State Fair Park in Grand Island. The learning area educates the public about water quantity and quality, groundwater stewardship, natural filtration techniques, efficient water use, and the Ogallala Aquifer. The team installed permanent signage to identify the bioswale, rain garden, prairie, and general layout of the area. The State Fair is attended by over 300,000 people annually. The site was also selected as part of the Great Park Pursuit in conjunction with the Nebraska Recreation & Parks Association and the Nebraska Game & Parks. The Great Park Pursuit is designed to get citizens outdoors, this year 536 Great Park Pursuit team members visited the Outdoor Learning Area. -- The team raised funds to implement ROAs through a United Way and Community Foundation sponsored fundraising campaign.
Keith County NE

Nancy Armstrong
P.O. Box 145
Ogallala, NE 69153

Phone Number: (308) 289-6347
E-mail: nancyarmstrong@opsd.org
Website:

Community Profile:
Keith County is also home to Nebraska's largest reservoir, Lake McConaughy. While no major problems exist with drinking water, residents are concerned about nitrate levels and agricultural and domestic contaminant sources. Keith County uses Groundwater Guardian as part of its educational programs for students and community members.

Result-Oriented Activities:
Presented water education events and activities at the Lake McConaughy Visitor's Center to inform students and visitors about the many competing issues surrounding water resources. Events and activities included field trips for over 30 students and teachers on water, birds, and mammals; a water history day for 150 area students; an outdoor education event for 200 students to learn about groundwater/surface water, hydrogeology, water properties and hydroelectric power; art adventure sessions for students to learn about science, art, and nature; hosted a booth at the Kingsley Dam Celebration to educate the public on recycling and water quality; held a sandcastle sculpture contest to promote water quality; discussed the importance of clean water for wildlife at the National S'More Event; and more.
Lincoln NE

Frank Uhlarik
555 South 10th Street
Lincoln, NE 68508

Phone Number: (402) 441-7588,
Fax: (402) 441-7590
E-mail: fuhlarik@lincoln.ne.gov
Website: water.lincoln.ne.gov

Community Profile:
Lincoln's over 250,000 residents rely on groundwater for their drinking water needs. The Platte River provides most of the recharge for the city's water supply near Ashland. Maintaining quality water to sustain the community, especially during warm weather months and/or drought conditions is currently a major concern. The continued growth of Lincoln also requires the city to continue long-term water conservation programs. Lincoln uses Groundwater Guardian in combination with the Mayor's Water Conservation Task Force and the Mayor's Environmental Task Force to educate and inform the public to help them conserve water and better utilize it using best management practices.

Result-Oriented Activities:
Sponsored an annual citywide water conservation poster contest for approximately 250 5th grade students. The winning ten "Be Water Wise" posters were featured on the city website, on bookmarks distributed to local city libraries, billboards, and busboards. -- Continued to update and expand the City’s website to include additional information about water conservation and team projects. -- Continued to provide speakers for a water conservation Speakers Bureau. -- Participated in Earth Wellness Festival where 5th graders circulate through hands-on workshops covering topics such as: water, land, air, and living resources. -- Included the Groundwater Guardian logo on all printed materials and displays.
Village of Trenton NE

Wendy McKain  
402 Main Street  
P.O. Box 68  
Trenton, NE 69044

Phone Number: (308) 334-5488,  
Fax: (308) 334-5678  
E-mail: vtrenton@gpcom.net  
Website: www.villageoftrenton.net

Community Profile:  
Groundwater provides all of the drinking water for the 560 residents of Trenton. Two new wells provide excellent high quality water to the community, and the Groundwater Guardian team plans to reinforce citizen awareness regarding their drinking water and its protection. The new wellfield has been enrolled in the Conservation Reserve Program (CRP), with some additional private land also enrolled in CRP for wellhead protection. Trenton uses the Groundwater Guardian program to encourage water conservation in all areas of water use.

Result-Oriented Activities:  
Maintained the Village wellfield's involvement in the Groundwater Guardian Green Site program to ensure best practices around the City's wells. -- Conducted an annual survey among residents about changes in plumbing connections in order to prevent backflow.
Community Profile:
The Las Vegas Valley hydrographic basin has been over-appropriated since 1955 and the area's population of two million continues to grow. The declining water table has caused well failures and higher pumpage costs for public and private well users. In 1997 the Nevada Legislature authorized the Southern Nevada Water Authority to establish a Groundwater Management Program and the Advisory Committee for Groundwater Management. The Groundwater Management Program uses Groundwater Guardian to promote the importance of protecting groundwater supplies from contamination, as well as informing well users about important groundwater issues.

Result-Oriented Activities:
Continued the Well Conversion Grant Program, which provides financial assistance to well users wishing to connect to a municipal water system. Over 500 businesses and households have utilized the program since it began in 1999. -- Provided financial incentives to homeowners who replaced turf with water smart landscaping, such as drought tolerant plants and trees. Since the program's inception in 2002, 710 conversions have been completed, converting a total of more than 1.8 million square feet of turf to water-smart landscaping. Water meters are also offered to help monitor usage, distributing 402 meters and 208 installation rebates to well owners since 2008. -- Provided funding to plug unused and abandoned wells. More than 350 unused wells have been closed as a result of the program. -- Continued to hold an Advisory Committee meeting to provide recommendations for the activities of the Groundwater Management Program. -- Held an annual public workshop for private well owners.
Merrimack NH

Jill Lavoie
2 Greens Pond Road
Merrimack, NH 03054

Phone Number: (603) 424-9241 x 103,
Fax: (603) 424-0563
E-mail: jill.lavoie@mvdwater.org
Website: www.mvdwater.org

Community Profile:
Because groundwater supplies 100 percent of the drinking water needs for Merrimack's 26,600 residents, keeping up with water demand throughout the town's new construction is a concern. Keeping the public aware of groundwater and wellhead protection, as well as levels of iron, manganese, sodium, and chloride in District wells, are top priorities for the community. In addition, the Groundwater Guardian team wants to emphasize wellhead protection, education of the community and especially town officials.

Result-Oriented Activities:
Participated in a Water Festival to educate over 300 fourth grade students through presentations, exhibits, and hands-on activities. Water-related science fair projects made by students were also presented. -- Because of concern over rising levels of sodium and chloride levels in community wells, certain streets were targeted as no salt/low salt areas during snow removal. The Village will continue to monitor salt application throughout the coming winter, and work to educate local businesses about salt use and alternatives to salt for de-icing. -- Educated and involved the community in preventing a gas pipeline's installation.
Stafford Township NJ

Sherry Roth
260 East Bay Avenue
Manahawkin, NJ 08050

Phone Number: (609) 713-6386,
Fax: (609) 597-6666
E-mail: sherry.roth@gmail.com
Website: twp.stafford.nj.us/departments/community-development/environmental-commission

Community Profile:
Groundwater provides for all of the drinking water needs of the 26,535 residents in the Stafford Township area. Currently, the community is facing problems from the unsolicited distribution of a newspaper; resulting in littering, damage to street sweepers, and pollution to waterways. Stafford Township uses Groundwater Guardian to help educate the public regarding potential sources of groundwater contamination and the importance of stormwater management to enhance clean groundwater recharge and discharge into the Bay.

Result-Oriented Activities:
Held an Arbor Day Celebration, the theme was Forests, Lakes, and Groundwater. Students participated in poster, poem, and essay contests to show their understanding of the interconnectivity of lakes and groundwater and forests' role in protecting groundwater resources.
Moodna Watershed Intermunicipal Council NY

Kelly Morris  
Orange County Water Authority  
124 Main Street  
Goshen, NY 10924  

Phone Number: (845) 615-3847,  
Fax: (845) 986-1124  
E-mail: kmorris@orangecountygov.com  
Website: waterauthority.orangecountygov.com/moodna_council.html

**Community Profile:**  
Approximately half of the population of the Moodna Creek watershed rely on groundwater for drinking water from many different sources, including tributaries, sand and gravel aquifers, and bedrock aquifers. The community is very concerned with preserving water quality in the face of intense growth. The Moodna Watershed uses the Groundwater Guardian program to educate the public about potential threats to water quality.

**Result-Oriented Activities:**  
Participated in the Orange County Water Authority Children's Earth and Water Festival, hosting a table with watershed and general water resources information. -- Hosted guest speakers at quarterly Council meetings that addressed water resource issues in the Moodna Creek and Hudson River Watersheds. -- Monitored the Moodna Creek and three tributaries. The information gathered is used to educate and demonstrate projects to the public and municipal officials about watershed problems and possible solutions.
Town of Wallkill NY

Lou Ingrassia  
Town Hall  
99 Tower Drive, Building A  
Middletown, NY 10941  

**Phone Number**: (845) 326-1435,  
**Fax**: (845) 692-2546  
**E-mail**: louingrassia@townofwallkill.com  
**Website**: www.townofwallkill.com

**Community Profile:**
The 15,500 people who live in Wallkill receive all of their drinking water from local groundwater supplies. Wallkill's main wellfields are along the Wallkill River and subject to potential contamination from an urban setting. The Town wishes to continue to protect its groundwater by educating its citizens about groundwater protection options and water conservation. Wallkill uses the Groundwater Guardian program in its education and wellhead inspection programs.

**Result-Oriented Activities:**
Prepared and distributed the Annual Water Quality Report to water customers and the Department of Health. The report included information for water customers to learn more about water conservation and groundwater protection. - Continued to air public service announcements about water conservation and wellhead protection on local cable television. -- Continued implementation of the Stormwater Phase II requirements, with an emphasis on education and outreach and public involvement, to reduce pollution from stormwater discharges into streams. -- Hosted a Groundwater Night to educate the community about groundwater concepts, including geology, and the community's water resources.
Community Profile:
In Mecklenburg County, population 990,977, approximately 15 percent of homes and businesses rely on groundwater as their drinking water source. Most of the people access groundwater through private and neighborhood wells. Mecklenburg County is in an urban area and has almost 1,500 known groundwater/soil sites of contamination. It is important to protect the groundwater as a safe drinking water source and to identify areas where it is not safe to drink. Mecklenburg County uses Groundwater Guardian to participate in community events that provide opportunities to educate the public about the groundwater system.

Result-Oriented Activities:
Held a booth at a citywide, public information event for 850 realtors to provide information and education on groundwater resources, private wells and septic systems.
Orange County NC

Tom Davis  
P.O. Box 8181  
Hillsborough, NC 27278

**Phone Number:** (919) 245-2510,  
**Fax:** (919) 644-3351  
**E-mail:** tdamis@orangecountync.gov  
**Website:** orangecountync.gov/deapr/index.asp

**Community Profile:**
Approximately 37 percent of the drinking water needs for Orange County's 140,000 residents are met by local groundwater supplies. The County is working to proactively address the quality and quantity of local groundwater supplies, including radon and arsenic concentrations. In general, the County's groundwater is of acceptable quality, though concerns exist over the availability of groundwater, especially during periods of drought. Orange County uses Groundwater Guardian in local public education and awareness efforts.

**Result-Oriented Activities:**
Participated in various community events and activities to educate the public about the importance of groundwater. Information about local groundwater issues was distributed, and groundwater model presentations were given to demonstrate groundwater movement. -- Continued collecting data for a groundwater observation well network, Orange Well Net (OWN), to monitor groundwater levels across the county. The network serves as a drought monitoring tool with an early warning system for declining groundwater levels. Groundwater levels are currently collected every hour in 14 wells, and the information is available to the public via the North Carolina Division of Water Resources website.
Community Profile:
The Brown County Rural Water Association is a rural water system relying completely on groundwater, with wells over 70 feet deep tapping into the Ohio River Aquifer. This aquifer is highly susceptible to contamination, due to the sand and gravel composition of the aquifer and its proximity to potential contaminant sources. Specific contamination concerns include septic tanks, agricultural chemicals, highway traffic, and potential gravel mining operations. One production well was contaminated by VOCs in 1996. A pump-and-treat remediation system was installed as a result, and the aquifer has been restored to the point that no detectable contaminants were found. The lessons learned from this experience were great, none more important than the value of groundwater pollution prevention. Brown County is home to 25,000 people, and uses Groundwater Guardian to educate the public about the importance of protecting groundwater resources and to instill a sense of ownership of the well fields in community residents.

Result-Oriented Activities:
Continued implementation of a long-term wellhead protection management plan, which has been approved by the Ohio EPA. The plan was created to ensure a long-term, easy to follow and implement plan to manage the area to ensure groundwater is protected. Participation in Groundwater Guardian is included as part of the plan. -- Held regular wellhead protection committee meetings for local groundwater users. The meetings address local and national environmental issues and regulatory updates. -- Continued to update and maintain a website for the Brown County Rural Water Association and Groundwater Guardian team. The site includes links to federal, state, and local groundwater sites, as well as information about wellhead protection efforts, water treatment, and public education. -- Adopted a section of highway US 52 between White Oak Creek and Straight Creek for quarterly cleanups. This section of the highway is near community wellfields and is part of the wellhead protection area.
Dayton Multi-Jurisdictional Source Water Program OH

Gayle Galbraith
320 West Monument Avenue
Dayton, OH 45402
Phone Number: (937) 333-3725
Fax: (937) 333-2833
E-mail: gayle.galbraith@daytonohio.gov
Website:

Community Profile:
The City of Dayton taps a sole source aquifer for 400,000 water consumers. Hundreds of businesses with 175 million pounds of hazardous materials operate near the wellfields. Over 17 million pounds of hazardous materials have been permanently removed from the Source Water Protection Area by financial incentives. Dayton, Huber Heights, Riverside, Vandalia, Harrison Township, and Wright-Patterson Air Force Base initiated a wellfield protection program using overlay zoning, monitoring, emergency response and financial incentives for risk reduction activities. Each jurisdiction has at least one person assigned to monitor compliance with the Source Water Protection Program. The Dayton Multi-Jurisdictional Source Water Protection Program uses Groundwater Guardian to increase citizen awareness of the wellfield protection program, establish a risk assessment program for businesses handling chemicals, provide groundwater and environmental education for children and the general public.

Result-Oriented Activities:
Continued to manage and oversee contracts for Multi-Jurisdictional Economic Development Specialists, Fire Prevention Inspector, Risk Assessment Consultant, Risk Assessor, and Environmental Specialists authorized by the Wellfield Protection Board, which promotes groundwater-friendly economic development of the area. -- Held the 20th Annual Children's Water Festival, which was attended by 1,700 fourth grade students. It featured presentations, entertainers, mascots and outdoor activities focused on groundwater, surface water, pollution prevention, wetlands, and recycling. -- The City of Dayton received three Public Technology Institute Solution Awards for achievements in groundwater protection and for educating future environmental stewards. -- Participated in a Water Career Conference for approximately 200 high school juniors and seniors to learn about careers in the water industry. -- Continued community outreach and educational events, making 68 presentations to citizens' groups, community organizations, school classrooms, and the business/economic development conference on groundwater protection. Other events included river cleanups, water treatment plant tours, maintaining green roofs on City Hall, using portable taps and a water trailer to provide free drinking water at public events, using an Enviroscape model to demonstrate runoff and pollution prevention, and more. -- Supported the City of Dayton's resolution to encourage regional sustainability by promoting Green Site Designation and Blue-Gold Certification to businesses in the source water protection area. -- Promoted pollution prevention practices at business inspections in the source water protection area. -- Distributed the PROGRESS Newsletter publication to 260 businesses and property owners in the source water protection area. The publication includes information on potential groundwater contaminants and prevention measures, resources for risk reduction projects and activities.
Hamilton to New Baltimore OH

Tim McLelland
5140 East River Road
Fairfield, OH 45014

**Phone Number:** (513) 785-2464,
**Fax:** (513) 867-7308
**E-mail:** tim.mclelland@hamilton-oh.gov
**Website:** www.gwconsortium.org

---

**Community Profile:**
The Hamilton to New Baltimore Groundwater Consortium is made up of the cities of Cincinnati, Fairfield, Hamilton, the SW Regional Water District, the SW OH Water Co. and MillerCoors LLC, and includes a population of 315,000. The Consortium wells are interrelated physically and directly influence the capture zone size of each system's wells. The Wellhead Protection (WHP) Area consists of a sand and gravel buried valley aquifer overlain by a densely populated industrial community. The majority of the wells behave hydrogeologically as a collective wellfield yet politically are separate. The characteristics that make it a productive source of drinking water are the same characteristics that make it susceptible to pollution from USTs, general chemical handling, dry wells, and improperly abandoned wells. The Consortium uses GG to inform the public about protecting groundwater resources, teach a basic understanding of what groundwater is and how human activities may affect its quality, and instill a sense of ownership of the wellfields and understanding that protection is necessary and worthwhile for the community.

---

**Result-Oriented Activities:**
Continued administration of the area's Source Water Protection Program. The Consortium worked with communities to update their ordinances, as well as businesses in new time of travel zones. -- Continued to update and maintain the local Source Water Protection Program website, with updated event information and photo galleries. A Facebook page also shares information about events and other program activities. -- Held a cleanup of a 17 mile stretch of the Great Miami River with over 300 volunteers. -- Held the 17th Butler County Water Festival, attended by over 1,000 4th, 5th, and 6th grade students. Over 80 volunteers and 37 presenters made this event a success - distributing supplies and giveaways to educators. Students learned about collecting groundwater data with an onsite well. -- Updated banners with the Groundwater Guardian logo at water plants and supply centers within the Consortium. -- Distributed a newsletter to the community to share information about groundwater protection in the area including program activities and updates. -- Offered assistance to help two businesses apply for Groundwater Guardian Green Site designation. -- Held an Earth Day event in downtown Hamilton attended by over 1,000 people. Attendees learned about groundwater protection and pollution prevention with a groundwater model demonstration. -- Continued to utilize a mini drinking water tower at community events to provide attendees with water, promoting the use of tap water and decreasing the use of bottled water. -- Held the sixth annual 5K Race and Fun walk to raise money for Water For People, an organization working globally to provide access to safe, clean water. -- Worked with volunteers from MillerCoors to clean and paint 95% of wells in Hamilton to New Baltimore's network. Groundwater protection and stewardship messages are shared with the volunteers. -- Held a Butler County Soil and Water Educational Field trip for over 50 volunteers and participants. -- Developed signage to be installed along bike trails to raise awareness about the local aquifer, groundwater protection, and conserving energy through wise water use.
Wright-Patterson Air Force Base OH

Karen Beason  
88 CEG/CEIEA  
1450 Littrell Road, Building 30022  
Wright-Patterson Air Force Base, OH 45433-5209

**Phone Number:** Home: (937) 257-5899,  
**Fax:** (937) 656-1534  
**E-mail:** karen.beason@us.af.mil  
**Website:**

**Community Profile:**
The WPAFB community is concerned with the quality of the base's drinking water for its population of 27,000. This concern is due to the number of landfill contaminants that have been found throughout the base. Extensive remediation has been accomplished; however, it has been difficult to change perceptions. Wright-Patterson uses the Groundwater Guardian program to develop and provide public awareness programs regarding the remediation of landfill contaminants, as well as implement a wellfield protection program to prevent possible groundwater contamination.

**Result-Oriented Activities:**
- Continued to maintain an up-to-date potential contaminant source inventory that identifies whether initial storage limits are exceeded and prevents the introduction of contaminants to the wellfield protection areas as part of a memorandum of understanding for the City of Dayton wellfields.
- Investigated seven former underground storage tank sites and one former oil/water separator sites to ensure no contaminants of concern are found.
- Participated in the City of Dayton's Annual Children's Water Festival as presenters and volunteers. The festival reached approximately 2,000 Dayton area students.
- Provided educational outreach programming to promote environmental awareness. Events were held during the week of Earth Day and news articles were printed in the air force base newspaper.
- Continued monitoring underground storage tanks.
Community Profile:
A reconnaissance study done by the Oregon Department of Environmental Quality (ODEQ) in the 1990s and early 2000s indicated that private and public wells within the Southern (Upper) Willamette Valley were experiencing nitrate contamination. The area is home to approximately 21,000 people who receive 85% of their drinking water from groundwater. In 2004, the ODEQ declared the area as a groundwater management area. Oregon law requires that such a declaration be accompanied by the development of an action plan to reduce the contamination. This action plan must be developed by a committee representing local stakeholders and was completed in late 2006. This community will use the Groundwater Guardian program to focus on a select few of the implementation of strategies indentified in the action plan.

Result-Oriented Activities:
Worked with area farmers in the groundwater management area to test for nitrate leaching below the root zone of the crops. As part of this study, a nutrient management workshop was held. Fact sheets about the study and workshop were created to increase public awareness.
Springfield OR

Amy Chinitz
202 South 18th Street
Springfield, OR 97477

Phone Number: (541) 744-3745,
Fax: (541) 747-7348
E-mail: amyc@subutil.com
Website: www.subutil.com

Community Profile:
Springfield’s wells are distributed throughout the city and surrounding residential, agricultural, commercial and industrial land use areas. Groundwater supplies 90 percent of the city's 56,000 residents' drinking water needs. Some wells are in or adjacent to areas where leaks and spills have caused groundwater contamination, and these plumes are being tracked and some undergoing bioremediation. Springfield uses Groundwater Guardian to help publicize the city's reliance on groundwater and the contamination risks faced, support educational programs in schools, participate in local organizations and support ordinances that help reduce the risk to drinking water supplies.

Result-Oriented Activities:
Worked with high school students to test water from 120 private household wells to provide community members free well water sampling, alerting them to potential contamination issues and the importance of preventing contamination. -- Continued the Cedar Creek Project, which involves 75 students, 10 teachers, and many community members in a multi-faceted approach to monitoring and restoring the Cedar Creek basin and illustrating the connections between groundwater and surface water. This year students will focus on communicating the long-term data they have collected to the public. -- Continued to update and revise a plan for enhancing current groundwater education activities, focusing on ways the team can educate and inform the public about Springfield’s groundwater supplies. -- Continued an inspection program to map stormwater quality facilities like bioswales and retention ponds. The program helps educate residents and business owners about the hydrologic connection between stormwater and groundwater in Springfield. -- Participated in a household hazardous waste roundup. 65 individuals brought in waste, amounting to 5,162 pounds of household hazardous waste. -- Created a best management practices manual for pesticide application in areas especially vulnerable to groundwater contamination.
Buhl Community Water PA

Gloria Coates  
372 Old Ash Road  
Mercer, PA 16137

**Phone Number:** (724) 748-5764,  
**Fax:** (724) 748-9603  
**E-mail:** buhlwater@zoominternet.net  
**Website:**

**Community Profile:**
Groundwater is the sole source of drinking water for the 1200 residents served by Buhl Community Water. Some of the groundwater-related concerns for this area include building public awareness and education, pollution prevention and conservation. The Villages use the Groundwater Guardian program to educate residents about the importance of groundwater protection through a variety of public information activities.

**Result-Oriented Activities:**
Continued local groundwater education and outreach efforts in the wellhead protection area through providing disposal options for potential contaminants.
Keystone Clean Water Team PA

Brian Oram  
15 Hillcrest Drive  
Dallas, PA 18612  

**Phone Number:** (570) 335-1947  
**E-mail:** bfenviro@ptd.net  
**Website:** www.carbonwaters.org

**Community Profile:**  
4.5 million of the 12.7 million people in Dallas receive their drinking water from groundwater supplies. Currently, the lack of private well standards and testing is a concern. Keystone Clean Water Team will use Groundwater Guardian to legitimize the group's efforts and empower local grassroots approaches.

**Result-Oriented Activities:**  
Participated in two educational training sessions for high school students on topics related to conservation and energy and two community meetings regarding groundwater resources and private wells. -- Finalized edits to an easy-to-read guide for private well owners, including information on drinking water standards, water treatment, basic water treatment, how to maintain a well, proper well construction, and oil and gas development and subsurface mining.
Community Profile:
The Meadville Area Water Authority serves a population of 16,000 with all of the drinking water supplied by groundwater. In 2006, the Authority received a Source Water Protection Grant to delineate the source water area, identify potential contaminants from residential, commercial, and industrial sources, and to develop action items to protect source water. The Authority has developed a state-approved wellhead protection program, and the team's goal is to maintain and update the program to work with municipalities, citizens, schools, and other organizations to provide education and make recommendations of needed ordinances to the proper governing bodies.

Result-Oriented Activities:
Continued Source Water Protection education to approximately 300 sixth graders at six schools. A Source Water Protection Poster Contest was held as part of this effort during Drinking Water Week.
Shrewsbury Borough PA

Brian Sweitzer  
35 West Railroad Avenue  
Shrewsbury, PA 17361  

Phone Number: (717) 235-1427,  
Fax: (717) 227-0250  
E-mail: bsweitzer@shrewsburyborough.org  
Website: shrewsburyborough.org

Community Profile:  
Shrewsbury Borough, with a population of 3,800, has all of its drinking water supplied by groundwater. It is currently dealing with the costs and fees related to current regulations, and uses Groundwater Guardian for educational resources and to learn more about regulations that may affect the Borough's water supply.

Result-Oriented Activities:  
Continued to recruit members for the York County Source Water Coalition, which functions to share ideas and resources to protect groundwater and surface water in the area. -- Monitored development in wellhead protection area. Worked with a medical facility to ensure wellhead requirements and stormwater discharge is compliant. -- Worked on emergency response to chemical spill, learned from the emergency response of a neighboring town during a chemical spill. -- Worked with an engineer to map distribution system assets and wellhead protection zones.
Washington County PA

Jennifer Dann
2800 North Main Street, Suite 105
Washington, PA 15301

Phone Number: (724) 705-7098,
Fax: (724) 249-2519
E-mail: info@wcwalliance.org
Website: www.wcwalliance.org

Community Profile:
Groundwater provides 45 percent of the drinking water to the area’s 208,716 residents. Current threats to groundwater include possible impacts from development of natural gas resources in the Marcellus Shale formation, particularly in the quality of well water, and the impact of urban and suburban development on groundwater. Washington County uses Groundwater Guardian to continue public education efforts in local schools and for the general public.

Result-Oriented Activities:
Continued stream monitoring efforts at 24 sites throughout the county. Water level, conductivity, and temperature are recorded every 15 minutes. These monitoring efforts in concert with public outreach and education help reduce pollution and improve water quality. Monitoring efforts also provide information on how groundwater influences the streams as most of the county's streams are groundwater-fed.
North Kingstown RI

G. Timothy Cranston  
80 Boston Neck Road  
North Kingstown, RI 02852  
Phone Number: (401) 268-1522  
E-mail: gcranston@northkingstown.org  
Website:

Community Profile:
The 26,296 people who live in North Kingstown rely on groundwater for all of their drinking water needs. Currently the community is concerned about the potential for bacterial contamination, as well as wastewater management and continued development. North Kingstown uses Groundwater Guardian as a component of various education programs.

Result-Oriented Activities:
Continued a public education initiative to educate the citizens of the community about the benefits of good wastewater management, stormwater management, and appropriate groundwater protection policies. Citizens were reached through press releases, mailings, and public forums. The team also reached all third grade students in the community with the message of groundwater protection. -- Held three events to educate the public on pollinators' role in maintaining a healthy environment and how to create habitats for pollinators from irrigated, fertilized, or mowed yards to not only aid pollinators but also protect groundwater.
Memphis and Shelby County TN

Greg Parker
814 Jefferson Avenue
Memphis, TN 38104

**Phone Number:** (901) 222-9599,
**Fax:** (901) 222-9561
**E-mail:** greg.parker@shelbycountytn.gov
**Website:** www.shelbycountytn.us

**Community Profile:**
Shelby County's residents draw 100 percent of their drinking water from the largest public artesian water supply in the U.S. Protecting the purity and quality of this groundwater supply is imperative. In 1987, for the first time, one of the water wells used to supply public water showed traces of chemical contamination. At approximately the same time, wells in a smaller municipality were contaminated with TCE which had spilled at a nearby manufacturing facility several years earlier. The contamination of these wells revealed that the depth of the aquifer and its confining strata would not act as a barrier to the downward migration of the variety of chemicals generated by an urban society. Memphis and Shelby County use Groundwater Guardian to develop a comprehensive aquifer protection and conservation education program and conduct annual regional conferences about groundwater issues.

**Result-Oriented Activities:**
Sampled and tested approximately 429 quasi-public wells located within Shelby County and 25 newly-installed residential wells for various contaminants. -- Continued the Well Survey Program. Performed 61 well surveys and 7 abandoned wells were closed. -- Performed 31 site inspections of 25 new water wells to verify construction standards are met. -- Reviewed all applications for proposed installation of remediation systems at sites throughout Shelby County. Issued 153 permits for remediation efforts and performed 50 site inspections. -- Provided a presentation on the value of water resources and the Memphis Sand Aquifer for use by the Ground Water Quality Control Board members for presentations to rotary clubs, schools, and other community groups. -- Reviewed 322 site plans and inspected 31 sites before new development was allowed in the aquifer recharge area. One abandoned well was located as a result, and properly filled before construction activities began. -- Continued to utilize GIS to map areas with the greatest concern in relation to the Memphis Sand Aquifer. Eighteen GIS projects were completed that dealt with the protection of the water-bearing aquifers of Shelby County and other health-related issues. -- Sealed 15 abandoned water wells within Shelby County. -- Maintained a permanent collection site for Household Hazardous Waste. -- Continued age-dating of local groundwater. Continued sampling and testing indicate no modern water is entering the Memphis sand aquifer. -- Properly abandoned 153 unused monitoring wells. -- Made 194 site inspections to properly site 132 subsurface sewage disposal systems within Shelby County.
North Plains Groundwater Conservation District TX

Kirk Welch
603 E. 1st Street
P.O. Box 795
Dumas, TX 79029
Phone Number: (806) 935-6401,
Fax: (806) 935-6633
E-mail: k Welch@northplainsgcd.org
Website: www.northplainsgcd.org

Community Profile:
Groundwater depletion is the major concern for the eight counties within the North Plains Groundwater Conservation District. This region is home to over 71,000 people who utilize groundwater for 100 percent of their drinking water. Lack of recharge in this part of the Ogallala Aquifer indicates groundwater mining, and teaching water conservation and raising public awareness is a major goal of this District. Rules are now in place that regulate the amount of groundwater that can be pumped by well owners each year and that limit the proximity of new wells to existing wells. As a Groundwater Guardian Community, the District offers education to the public through outreach programs.

Result-Oriented Activities:
Held a water festival for local students. Since 2005, approximately 8,250 students have been reached with messages about water protection and preservation. -- Held a day-long class on water-wise gardening and xeriscaping in partnership with local Master Gardeners for 85 residents. -- Continued distribution of the "Major Rivers" water conservation curriculum to 4th grade teachers and their students in the District. The curriculum educates students about their water resources and their role in protecting and conserving them. -- Sponsored a water conservation artwork contest for 4th-6th graders in District counties. Winning entries are featured in a water conservation calendar provided free to the public, given away to hundreds of people each year. -- Gave classroom presentations to approximately 300 students in all age levels, from K-12. -- Presented information on the Ogallala Aquifer and the need for conservation to fourth grade students attending the Farm Bureau Ag Fairs in eight district counties. -- Continued a demonstration project to show how the latest irrigation management strategies and technologies reduce water used for growing corn. The project is aimed at showing producers how their efficient use of water can help them maximize their return on investment while preserving water for the future. Corn irrigation uses 63% of the groundwater pumped in the District. -- Continued the "Operation: Summer Showers" public relations campaign to help residents reduce their water use, particularly during the summer months. Conservation kits were distributed in cooperation with water utilities in each county. The program was promoted through radio and newspaper public service announcements. -- Educated 5th graders about water conservation and water saving techniques. -- 35 individuals completed the Master Irrigator Program, a 32-hour intensive educational program for producers to learn irrigation management and conservation practices that work together to save water, conserve energy, and build healthy soil.
Renton WA

Helen Weagraff
1055 South Grady Way
Renton, WA 98057

Phone Number: (425) 430-7287
E-mail: hweagraff@rentonwa.gov
Website: www.rentonwa.gov

Community Profile:
Renton is home to 95,540 people that receive all of their drinking water from local groundwater supplies. The protection of a shallow aquifer located beneath downtown businesses from various forms of contamination is a top priority for the residents of the area, as well as maintaining quality and quantity of service in the face of new City growth. Renton uses the Groundwater Guardian program to raise awareness about local drinking water and groundwater issues.

Result-Oriented Activities:
Participated in Renton River Days, attended by 1,500 people, by hosting a booth. Educational materials were distributed about where the city gets its drinking water and how to protect it. The team used a fish tank model of an aquifer and led groundwater games and activities. -- Participated in Family Science Night to educate 140 parents and children about groundwater.
Calumet WI

Jan Vergowe  
W1326 Hemauer Drive  
New Holstein, WI 53061

**Phone Number:** (920) 898-4443  
**E-mail:** pvergowe@frontier.com  
**Website:**

**Community Profile:**
Calumet County’s 45,995 residents draw 90 percent of their drinking water from the local aquifer. Historically, test results from approximately 20% of private wells show unsafe levels of bacteria and nitrates. The county is especially sensitive to groundwater contamination from shallow soils overlying fractured dolomite bedrock and moderately developed Karst topography. The magnitude of current water quality problems indicates that multiple sources and land use activities are affecting groundwater supplies. Calumet uses Groundwater Guardian to increase awareness of groundwater problems, educate the public about land use and conservation practices, expand existing educational efforts to reach new audiences and build trust and relationships with community members and other citizen action groups.

**Result-Oriented Activities:**
Provided scholarship to two local middle school students to attend the Sand Lake Conservation Camp. To date, 17 students have attended camp on scholarship. The camp provides positive, educational outdoor experiences. -- Assisted in a water sampling event for area residents to help create awareness of the importance of annual water well testing. Approximately 161 wells were sampled and tested for bacteria, nitrate, and arsenic, and 59 attended an educational event as part of the effort. Test results are used to monitor groundwater quality for program planning, development, and implementation. -- Worked with local volunteers to conduct monthly water monitoring. -- Participated in a statewide event that trains volunteers to identify invasive species, setting up volunteers at 10 sites. -- Introduced water quality and aquatic wildlife curriculum to 131 students and 9 teachers with hands-on monitoring efforts. Students learned about land use and water pollution and groundwater and surface water’s connection. -- Increased public awareness through a series of news releases.
Chippewa Falls WI

Connie Freagon
30 West Central Street
Chippewa Falls, WI 54729

Phone Number: (715) 726-2741,
Fax: (715) 726-2750
E-mail: cfreagon@chippewafalls-wi.gov
Website: www.chippewafalls-wi.gov

Community Profile:
The 13,682 people who live in Chippewa Falls use groundwater for all of their drinking water needs. The City of Chippewa Falls obtains its water supply from wells located in a shallow sand and gravel aquifer. These wells are in wellfields with the majority of the zone of contribution area outside city boundaries. Nitrate, iron, and manganese levels are a concern, along with the strong probability that over 425 acres of agricultural land in the zone of contribution will soon be developed for industrial, commercial and residential uses in the next five to ten years. Chippewa Falls uses Groundwater Guardian to educate residential, business and agricultural landowners.

Result-Oriented Activities:
Staffed booth at Northern Wisconsin State Fair, attended by over 90,000 people. Various educational materials were distributed and two rain barrels were given away. -- Demonstrated an aquifer recharge model with pollution and distributed Groundwater Guardian bracelets and groundwater information to fifth grade students at State Park Conservation Days. -- Hosted the Safe & Green Sweep Project to collect and properly dispose of expired and unwanted pharmaceuticals. -- Worked towards developing public service announcements for groundwater protection and conservation. -- Teamed up with Boys & Girls Club to label 110 storm drains. -- Began discussion to create an educational resource area at a riverfront park to include a natural science walk.
Kewaunee County WI

Davina Bonness
625 Third Street
Luxemburg, WI 54217

Phone Number: (920) 845-9743,
Fax: (920) 845-9745
E-mail: bonnessd@kewauneeco.org
Website:

Community Profile:
Over 75 percent of the land is Kewaunee County is dedicated to agriculture, making the preservation of a clean, safe water supply for the public a top priority for the team. Recent private well testing indicates the presence of nitrates and bacteria, which has not only raised awareness but prompted well owners to become involved with the Groundwater Guardian team. The team is working to become a sustaining informational and educational, neutral organization that informs the public regarding potential groundwater contamination hazards. Kewaunee County, with a population of 20,648 relying more than 70 percent on groundwater for drinking water supplies, uses Groundwater Guardian to educate the public about potential private well contaminants through well testing programs, school programs and local event booths.

Result-Oriented Activities:
Assisted the Kewaunee County Land & Water Department in collaboration with the University of Stevens Point in a private well testing program. Team members tested 128 wells (almost half of which had never been tested) and worked with well owners on proper well water sampling and the importance of regular private well testing; the wells were tested for coliform bacteria and nitrates, mapped, and documented. An informational seminar was held to discuss results, which was attended by 140 people. -- Created and sold 60 rain barrels as a fundraiser for the team’s groundwater education activities.
Marshfield Area WI

Cathy Lotzer
P.O. Box 670
2000 South Central Avenue
Marshfield, WI 54449

Phone Number: (715) 387-1195,
Fax: (715) 389-2016
E-mail: lotzer@marshfieldutilities.org
Website: www.marshfieldutilities.org/index.php/environment/groundwater-guardians

Community Profile:
The 20,000 residents of the Marshfield area receive all their drinking water from local groundwater supplies. Marshfield's municipal wells are shallow (50-90 feet deep) and exist in narrow, confined bedrock channels. Domestic and farm wells are low yielding wells drilled into fractured rock. Top soil consists of 8 to 10 feet of tight clay soils, which limits recharge. Marshfield uses Groundwater Guardian to promote education and awareness of the need for groundwater protection.

Result-Oriented Activities:
Continued to educate residents about the efforts of the Marshfield Groundwater Guardian program and projects to generate interest in the group's efforts and recruit new team members. An ad runs on the local AM and FM radio stations monthly, as well as on the Utility's telephone system. -- Continued the Rx Round-Up Pharmaceutical Take-Back Program. A permanent site has been established for residents to take their unused/expired pharmaceuticals for proper disposal through incineration. Since the program began in 2006, 9,563.6 pounds of pharmaceuticals have been collected. -- Held a groundwater education event for 55 Girl Scouts to earn their first groundwater patch and to equip the 15 attending troop leaders with the supplies needed to lead their troops in earning their second patch.
Community Profile:
The Village of Milladore and the Towns of Eau Plaine and Milladore make up the Milladore Area, with a population of approximately 2,000 people. This area relies solely on groundwater for all its drinking water needs. Testing has indicated the presence of bacteria in drinking water, and nitrate levels have been a concern. The Milladore Area Groundwater Guardian team uses the program to educate the public and youth about keeping groundwater a priority in their everyday lives.

Result-Oriented Activities:
30 of the Village’s 50 private wells used for outdoor use were tested for bacteria and inspected to ensure they were up to code. From these testings, two wells have been abandoned. The team helps ensure these tests are conducted every five years.
Casper Aquifer Protection Network WY

Kimberly Starkey
2216 Sky View Lane
Laramie, WY 82070

Phone Number: (307) 745-8433
E-mail: Kimberlystarkey@msn.com
Website:

Community Profile:
The Casper Aquifer Protection (CAP) Network is made up of private well owners located in or near the Casper Aquifer Protection Zone, and includes roughly 1000 people that depend on groundwater for all their drinking water needs. While there are no serious problems with the area’s groundwater supply, Network members want to educate rural property owners about ways they can protect groundwater quality through wellhead and septic tank maintenance, regular water quality testing, the use of best management practices, and environmental awareness. The CAP Network uses Groundwater Guardian to provide information to property owners in the community.

Result-Oriented Activities:
Presented a Groundwater Guardian plaque to the Albany County Board of Commissioners to recognize its efforts to protect the Casper Aquifer through policy decisions. — Created and distributed two newsletters to approximately 250 members. The newsletters focused on National Groundwater Awareness Week, groundwater stewardship, Wyoming’s annual "Know Your Well Day," and pesticide use. — Participated in a local Fourth of July celebration to provide information to the public about the geology of the Casper Aquifer, groundwater protection including contamination prevention, well and septic system maintenance, and more. The team used an interactive display to test participants' knowledge of small, onsite wastewater systems. — Presented data from the Casper Aquifer Protection Network's water sampling program to the County Commission and the County Planning and Zoning Commission, showing the high quality of groundwater and the overall health of the Casper Aquifer.
Alabama Dept. of Environmental Management AL

Whit Slagle
P.O Box 301463
Montgomery, AL 36130

Phone Number: (334) 271-7831,
Fax: (334) 270-5631
E-mail: cws@adem.state.al.us
Website:

Affiliate Profile:
Mission: To provide technical, financial and program support to communities and utilities throughout the state regarding groundwater protection and assessment. Service Area: The State of Alabama.

Result-Oriented Services:
Continued to work to recruit new communities into the Groundwater Guardian program by contacting communities that hold Groundwater Festivals. -- Assisted with the state’s Groundwater Festivals program by helping find funding and providing support to add to the counties in Alabama with active festival programs. Approximately 21,500 students have attended 26 Groundwater Festivals around the state. -- Continued to provide technical assistance with Source Water Assessments and Local Wellhead Protection programs. Four Source Water Assessments have been reviewed.
Affiliate Profile:
Mission: To manage and protect the Niles Cone Groundwater Basin and ensure a reliable supply of high quality water that satisfies present and future uses of the service area at a reasonable cost. Service Area: The cities of Fremont, Newark and Union City; a 104.8 square-mile area with a population of over 340,000.

Result-Oriented Services:
Continued education and information support in area schools and communities. Sponsored 59 performances by ZunZun’s water theater program at 30 schools to over 17,000 students stressing the importance of groundwater. 43,000 pieces of printed educational materials were provided to teachers and students. The District also worked with five Advanced Placement environmental sciences classes to provide more in-depth information about water resources. Pamphlets and brochures explaining the importance and benefits of groundwater protection, pollution prevention and water conservation methods were distributed at public events as well as in water bill inserts. -- Updated content on the District website with additional information about the groundwater basin, District programs, Groundwater Guardian, and Groundwater Awareness Week. -- Continued to implement an ordinance to regulate wells, exploratory holes, and other excavations in district communities. -- Worked to digitize over 14,797 well permits, 3,470 well completion reports, well location maps, and other historical documents to further reconcile well location information, locate abandoned wells and evaluate their potential to negatively impact the groundwater basin.
Mission Springs Water District CA

John Soulliere
66575 Second Street
Desert Hot Springs, CA 92240

Phone Number: (760) 329-5169 x 144,
Fax: (760) 329-2482
E-mail: jsoulliere@mswd.org
Website: www.mswd.org

Affiliate Profile:
Mission: To provide, protect, and preserve our most valuable resource - water. Service Area: The district operates three separate water distribution systems and two separate wastewater collection and treatment systems, serving Desert Hot Springs, 10 smaller communities in Riverside County, mobile home parks, resorts and a small portion of Palm Springs. The District was incorporated in February 1953 as a County Water District and is now a Special District of the State of California. The service area includes 135 square miles and over 25,000 people.

Result-Oriented Services:
Continued to provide support to the Desert Hot Springs Groundwater Guardian team in the form of office storage, operating space, administrative support and technical support. -- Provided $30,000 in funding to support the various groundwater protection and education activities of the Desert Hot Springs Groundwater Guardian team.
Santa Clara Valley Water District CA

Vanessa De La Piedra
5750 Almaden Expressway
San Jose, CA 95118

Phone Number: (408) 630-2788,
Fax: (408) 979-5610
E-mail: vdelapiedra@valleywater.org
Website: www.valleywater.org

Affiliate Profile:
Mission: Aggressively protect the groundwater basin from contamination and the threat of contamination, and ensure groundwater supplies are sustained. The District manages Santa Clara County’s wholesale drinking water resources, coordinates flood protection, and provides stewardship for the county’s 10 reservoirs and more than 700 miles of streams. Service Area: Santa Clara County, a 1,300 square mile area with a population of over 1.8 million people.

Result-Oriented Services:
Continued a water conservation program, which included thousands of rebates for water-efficient water fixtures in homes and businesses, free "Water Wise House Calls" to check for leaks and install free showerheads and aerators, free landscape surveys to help large landscape managers become more water efficient, and extensive outreach and education. In 2016, the District conducted 2,781 "Water Wise House Call" surveys, issued rebates for/or installed 2,572 high efficiency toilets, issued 266 commercial clothes washer rebates and issued 2,805 landscape rebates. The program saved an estimated 67,000 acre-feet of water, which is more than 15% of the total water used in the county. --
Continued a groundwater management program that provides services to well owners and groundwater users in the county, including offered free basic water quality testing (sampled 195 wells for nitrates and bacteria), sampled 84 monitoring wells to include data in annual reports, commemorated Groundwater Awareness Week through a resolution adopted by the District Board and promoted on the District website and social media, presented groundwater information to small acreage owners, distributed a groundwater quality report to all well owners, and continued a rebate program for the installation of point of use treatment systems for domestic wells with elevated nitrate. --
Continued an educational outreach program, making classroom presentations, giving tours, and training teachers. 16,264 students and 796 educators were involved during the 2015-2016 year. Staff conducted tours of the water district’s outdoor classrooms and the water purification center. Staff also trained 182 teachers at workshops. --
Participated in two surface water clean-up days and hosted informational booths at a number of local community events.
Central Regional Groundwater Protection Planning Committee IL

Evelyn Neavear
Tazewell County Health Department
21306 Illinois Route 9
Tremont, IL 61568

Phone Number: (309) 925-5511 x 250,
Fax: (309) 925-4100
E-mail: eneavear@tchd.net
Website: www.crgw.net

Affiliate Profile:
Mission: To develop and implement local programs aimed at preventing groundwater contamination. The organization attempts to do this by educating adults and children about risk factors and methods of pollution prevention. Service Area: Central Illinois, including Mason, Peoria, Tazewell and Woodford Counties.

Result-Oriented Services:
Continued to co-sponsor the Clean Water Celebration for nearly 3,000 students to learn about water and encourage them to make a difference in the protection of this precious natural resource. The 2016 theme was "Be a watershed hero." -- Organized the Tazewell County Health Department Environmental Education Day for around 400 county 5th graders, who participated in hands-on activities like making edible aquifers and jungles in a jar, and learning about the water cycle, groundwater pollution prevention, recycling and other environmental issues. -- Offered free arsenic and nitrate testing to private well owners during Groundwater Awareness Week. -- Distributed 400 free leak detection kits during Fix a Leak Week.
Northeastern Regional Groundwater Protection Planning Committee IL

Daniel Horvath                                      Phone Number: (630) 232-9820,
P.O. Box 123                                         Fax: (630) 232-9824
Geneva, IL 60134                                     E-mail: dhorvath@resourceillinois.com

Affiliate Profile:
Mission: To advocate groundwater protection practices, procedures, and education throughout the
Northeastern Planning Region. The Northeastern Illinois Groundwater Regional Protection Planning
Committee is organized as a protective and collaborative effort of citizens, businesses, and local and state government
officials to further groundwater protection in this sensitive region. Service Area: DuPage, Kane, Kankakee, Kendall, and
Will counties.

Result-Oriented Services:
Held an educational seminar for 50 health department sanitarians, well contractors, and local water system operators
on groundwater monitoring and protection at an operating landfill. -- Provided bentonite at a reduced cost or free to
private well owners who want or need to seal a private well. The committee also provides funding to health
departments to promote the program. Between 5-10 wells were sealed in conjunction with the program. -- Participated
in a variety of regional community outreach events with activities and giveaway items, which reached several thousand
people, including the Kendall County Natural Resource Tour, school group meetings and Earth Day, Earth Day and Arbor
Day celebrations, and more. The Committee also maintains a Facebook page and posts brochures in public places like
libraries and city buildings to reach additional members of the public. -- Hosted the fourth informational and training
seminar for public and commercial snow and ice removal operators on the environmental impact of road salts and
hands-on training.
Northern Regional Groundwater Protection Planning Committee IL

Ruth Roth
3406 Roth Road
Rockford, IL 61114

Phone Number: (815) 519-8679,
Fax: (815) 547-7939

Website:

Affiliate Profile:

Result-Oriented Services:
Continued to develop programs to educate county boards, city councils, and planning/zoning officials about groundwater protection, which included working with McHenry County on their groundwater protection program, attending meetings of the Regional Water Supply Planning Group as part of the Chicago Metropolitan Agency for Planning and working with communities to become Groundwater Guardians. -- Conducted public education and outreach by participating in the 22nd annual youth groundwater festival at Rock Valley College which drew more than 550 fourth and fifth graders, a Youth Groundwater Festival in McHenry County, a Science, Technology Engineering, and Mathematics (STEM) festival for 240 students, the Boone County Fair, providing support for a county unused and expired medications collection effort, and other local initiatives. -- Continued to work with Winnebago, Boone and McHenry Counties to abandon unused wells. Over 261 have been abandoned since 2001, and an additional well was abandoned last year.
Southern Regional Groundwater Protection Planning Committee IL

John Wagner
901 Illinois Avenue
Waterloo, IL 62298

Phone Number: (618) 939-3871,
Fax: (618) 939-4459
E-mail: jwagner@monroecountyhealth.org
Website:

Affiliate Profile:
Mission: To advocate groundwater protection practices and procedures throughout the Southern Illinois Planning Region. Service Area: Madison, St. Clair, Monroe and Randolph Counties in Southwestern Illinois.

Result-Oriented Services:
Hosted two groundwater field day with various educational activities and speakers. Citizens, government officials, and others attended. -- Continued to maintain and update a library of groundwater educational materials for loan to citizens, schools, and other interested groups. The library consists of books, pamphlets, flow models, videos, and a traveling display. The team is looking into starting an electronic library for wider distribution. -- Continued to work to recruit new Groundwater Guardian Communities within the four county area. -- Continued to promote well sealing as a means of groundwater protection and to provide bentonite for use in sealing. -- Maintained and updated a Committee Networking Guide to serve as a resource guide for members and the public providing points of contact within various areas of expertise.
Affiliate Profile:
Mission: USGS has the principal responsibility within the federal government to provide hydrologic information and understanding needed by others to achieve the best use and management of the nation’s groundwater. To accomplish this, USGS, in cooperation with state, local and other federal agencies, systematically collects and analyzes groundwater data; conducts water-resource appraisals describing the occurrence, availability, and physical, chemical, and biological characteristics of groundwater; conducts basic and problem-oriented hydrologic and related research that aids in alleviating groundwater problems; and provides an understanding of groundwater systems sufficient to predict their response to natural and/or human-induced stress. Service Area: The State of Michigan and multi-state initiatives sponsored by the USGS and other federal agencies.

Result-Oriented Services:
Continued to make real-time data available online for two groundwater stations. Continuous and discrete data, as well as water quality data, is available for other groundwater sites throughout the state to assist with local groundwater evaluation and protection. -- Began compiling water use and groundwater withdrawal information statewide from 2015 for the USGS national 5-year summary report. The data compiled will help determine water budget assessments and provide reliable scientific information on current and historic groundwater conditions. -- Collected samples to monitor pesticides and metabolites in groundwater. The information collected will be used to make management decisions. -- Continued compiling list of public supply water use sites and comparing information in other databases as part of the USGS Water Census program.

**Affiliate Profile:**  
The Nebraska Water Center coordinates, implements, and facilitates water and water-related research, extension, teaching, and outreach programming within the University of Nebraska system as part of the Robert B. Daugherty Water for Food Institute at the University of Nebraska. The Nebraska Water Center has been a fixture at UNL for more than 40 years, being established as the Nebraska Water Resources Research Institute by Congressional mandate in 1964. It is one of a network of more than 54 water resources research institutes at Land Grant Universities nationwide. The Robert B. Daugherty Water for Food Institute at the University of Nebraska was founded in 2010 to address the global challenge of achieving food security with less stress on water resources through improved water management in agricultural and food systems.

**Result-Oriented Services:**  
Participated in a number of public education events in partnership with Nebraska Extension and the University of Nebraska-Lincoln School of Natural Resources. -- Published the quarterly "Water Current" newsletter featuring water-related news from around the state.

Affiliate Profile:
Mission: We provide scientific data collection and interpretation for Congress, State and local agencies, and tribes. Part of our mission is to educate these agencies and the public about all water-resource issues. Service Area: State of Nebraska.

Result-Oriented Services:
Participated in several outreach events in Nebraska to help communicate water science to the public. Educated fifth grade students at the Nebraska Children's Groundwater Festival on the water cycle. Educated the public on groundwater quantity, quality, modeling, and careers at the City of Lincoln's biennial Waterfest.
Affiliate Profile:
Mission: In order to protect the public's health through the protection of groundwater resources, the Groundwater and Wastewater Program approves and oversees private wells, on-site wastewater treatment and disposal systems and other regulated sites. Service Area: Mecklenburg County is a 524 square-mile area located in the southern Piedmont region of North Carolina. It is home to more than 990,000 people (15 percent utilizing groundwater) and is the center of a seven county metropolitan statistical area with an aggregate population of more than 1.3 million people. Mecklenburg County is divided into seven incorporated municipalities, ranging in size from Charlotte at 207 square miles to Pineville at 3.0 square miles.

Result-Oriented Services:
Provided funding support to the Mecklenburg County Groundwater Guardian Community team to participate in a Realtors Expo attended by 850 realtors.
Miami Conservancy District OH

Affiliate Profile:
Mission: To maintain a groundwater monitoring network that provides valuable data on groundwater quality and quantity in the watershed of the Great Miami River. To conduct special groundwater investigations individually or in partnership with other government agencies that address groundwater issues of concern in the watershed. Service Area: The watershed of the Great Miami River in southwest Ohio. The watershed encompasses nearly 4,000 square miles and includes the cities of Dayton, Hamilton, Middletown, Sidney, Springfield, and Troy.

Result-Oriented Services:
Continued collecting data for a Groundwater Monitoring Network to provide information on groundwater quality and quantity in the Great Miami River Watershed. Specifically, nutrient levels in the Great Miami River and its tributaries and quantifying the water budget for the Great Miami River Watershed. The annual water resources report was completed.
-- Provided financial support and presenters for the Butler County Water Festival, attended by approximately 1,000 students. Students learn about groundwater, surface water, conservation, land use, and other water-related topics. -- Provided support for the Great Miami Watershed Network by planning and coordinating meetings. -- Hosted test your well events in five counties, educating citizens on groundwater contamination and protection.
